

## Find Your Flock: Worksheet KEY

Name:	
Date:	

The chicks had so much fun playing together, but now it is time for them to go back to their own flocks. Can you match each chick to its mama?

Hens	Chicks

The image shows a matching exercise. On the left, under 'Hens', are four adult chickens: a speckled hen, a black hen, a black and white patterned hen, and a white hen. On the right, under 'Chicks', are five baby chicks: a brown and black speckled chick, a yellow chick, a grey chick, a black chick, and a brown and black speckled chick. Colored lines connect the chicks to their mothers: a green dashed line connects the speckled hen to the speckled chick; a blue dashed line connects the black hen to the black chick; a pink solid line connects the black and white patterned hen to the yellow chick; a red dotted line connects the white hen to the grey chick; and a blue solid line connects the brown hen to the brown and black speckled chick.

**Need help? Here are some questions to think about.**

1. What color are the feathers? Do they have any patterns? Do you see a crest or muff? Are there any other unusual feathers?
2. Do the legs have feathers? What color is the chicken's skin? How many toes do you see?
3. What color is the beak? What color are the earlobes? What color are the eyes?
4. What kind of comb can you see?
